

# Percentage of Care-Seeking Adults Diagnosed with Hypertension (18 years and older) By Census Tract, Metropolitan Denver, Colorado, 2016-2017

## CHORDS Adult Hypertension Prevalence

Seven-County Metro Denver: 17.9%

Adams County: 18.2%

Arapahoe County: 19.1%

Boulder County: 15.9%

Broomfield County: 20.8%

Denver County: 17.4%

Douglas County: 16.9%

Jefferson County: 18.0%

This map displays the percentage of care-seeking adults with at least one hypertension or hypertension-related diagnosis identified by CHORDS. The percentage of care-seeking adults with hypertension was calculated by dividing the number of adults with at least one ICD-9 or ICD-10 diagnosis code\* residing in a census tract by the total number of adults who received care at a participating data partner.

These data are comprised of care-seeking adults age 18 and older. The total number of adults represented with at least one care encounter during the observation time period is 811,078, or 35% of the total adult population of 2,349,509, as reported by the latest 5-year American Community Survey. Census tracts are designated as having insufficient data if: 1) the total population in the census tract has fewer than 50 adults; or 2) fewer than 50 valid care healthcare encounters in the census tract were collected; or 3) coverage was less than 10% of the adult population.

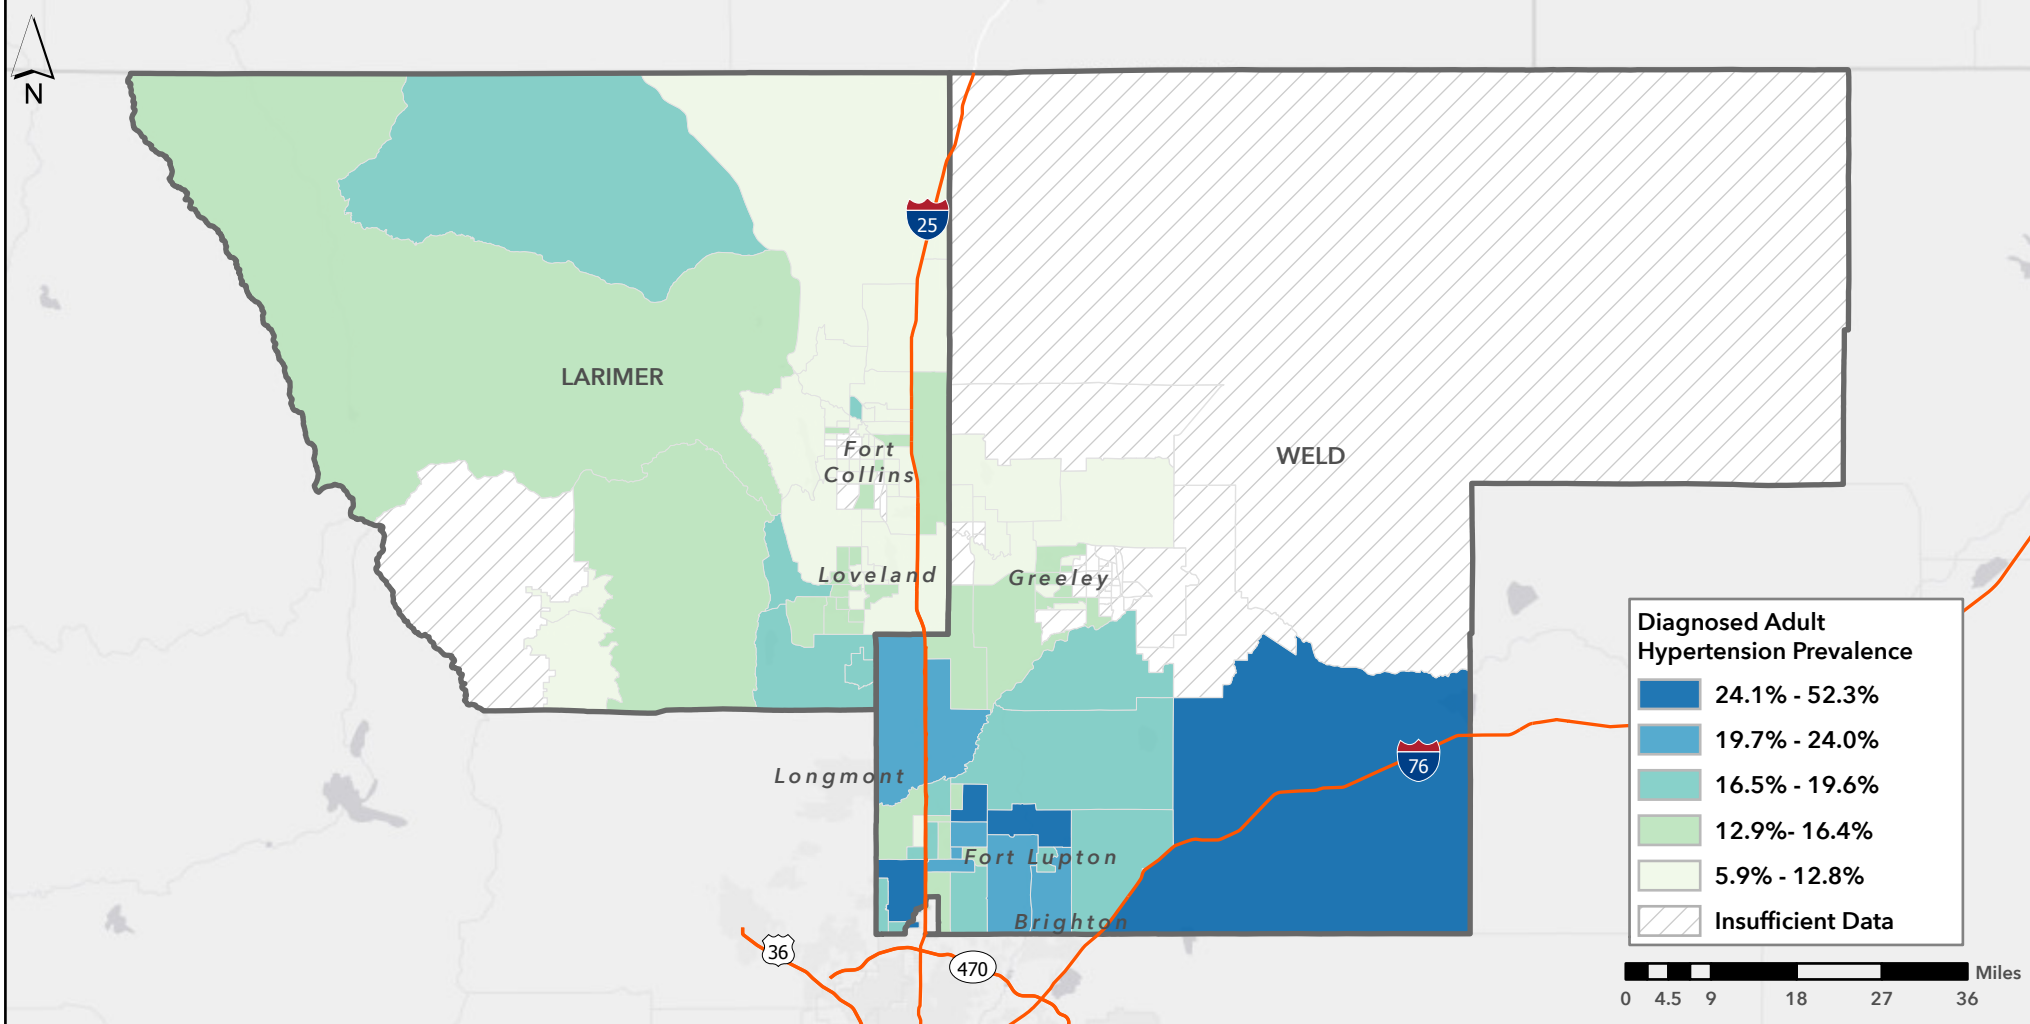

\*For a complete list of ICD-9 and/or ICD-10 codes used for hypertension please see the CHORDS Cardiovascular Disease Adapter documentation.

Map Created March 2019. To request additional maps and/or aggregated data tables, please contact Greg Budney, CHORDS Project Manager for Public Health, at [gregory.budney@dhha.org](mailto:gregory.budney@dhha.org).

A list of participating CHORDS Data Partners can be found at [www.chordsnetwork.org](http://www.chordsnetwork.org).

The Colorado Department of Public Health and Environment provides cartographic and web-based mapping services for CHORDS. This project is funded by The Colorado Health Foundation and the Adults and Child Consortium for Health Outcomes Research and Delivery Science.

# Percentage of Care-Seeking Adults Diagnosed with Hypertension (18 years and older) By Census Tract, Larimer and Weld Counties, Colorado, 2016-2017

**CHORDS Adult Hypertension Prevalence:** Larimer County: 12.4%, Weld County: 17.0%

This map displays the percentage of care-seeking adults with at least one hypertension or hypertension-related diagnosis identified by CHORDS. The percentage of care-seeking adults with hypertension was calculated by dividing the number of adults with at least one ICD-9 or ICD-10 diagnosis code\* residing in a census tract by the total number of adults who received care at a participating data partner.

These data are comprised of care-seeking adults age 18 and older. The total number of adults represented with at least one care encounter during the observation time period is 72,002, or 15% of the total adult population of 473,009, as reported by the latest 5-year American Community Survey. Census tracts are designated as having insufficient data if: 1) the total population in the census tract has fewer than 50 adults; or 2) fewer than 50 valid care healthcare encounters in the census tract were collected; or 3) coverage was less than 10% of the adult population.

\*For a complete list of ICD-9 and/or ICD-10 codes used for hypertension please see the CHORDS Cardiovascular Disease Adapter documentation.
