

Percentage of Care-Seeking Adults with Overweight or Obesity (18 years and older) By Census Tract, Metropolitan Denver, Colorado, 2016-2017

CHORDS Adult Overweight or Obesity Prevalence

Seven-County Metro Denver: 65.7%

Adams County: 72.4%

Arapahoe County: 66.5%

Boulder County: 58.4%

Broomfield County: 64.1%

Denver County: 63.7%

Douglas County: 63.0%

Jefferson County: 64.8%

This map displays the percentage of care-seeking adults who are overweight or obese, as identified by CHORDS.

Overweight or obese was defined as a BMI, calculated from height and weight, of 25.0 kilograms per meter squared (kg/m²) or greater. The percentage of care-seeking adults who are overweight or obese was calculated by dividing the total number of adults with a BMI of 25.0 kg/m² or higher residing in a census tract by the total number of adults with a valid BMI measurement.

These data are comprised of care-seeking adults age 18 and older. The total number of adults represented with valid BMI measurements during the observation time period is 681,157, or 29% of the total adult population of 2,349,509, as reported by the latest 5-year American Community Survey. Census tracts are designated as having insufficient data if: 1) the total population in the census tract has fewer than 50 adults; or 2) fewer than 50 valid BMI measurements in the census tract were collected; or 3) coverage was less than 10% of the adult population.

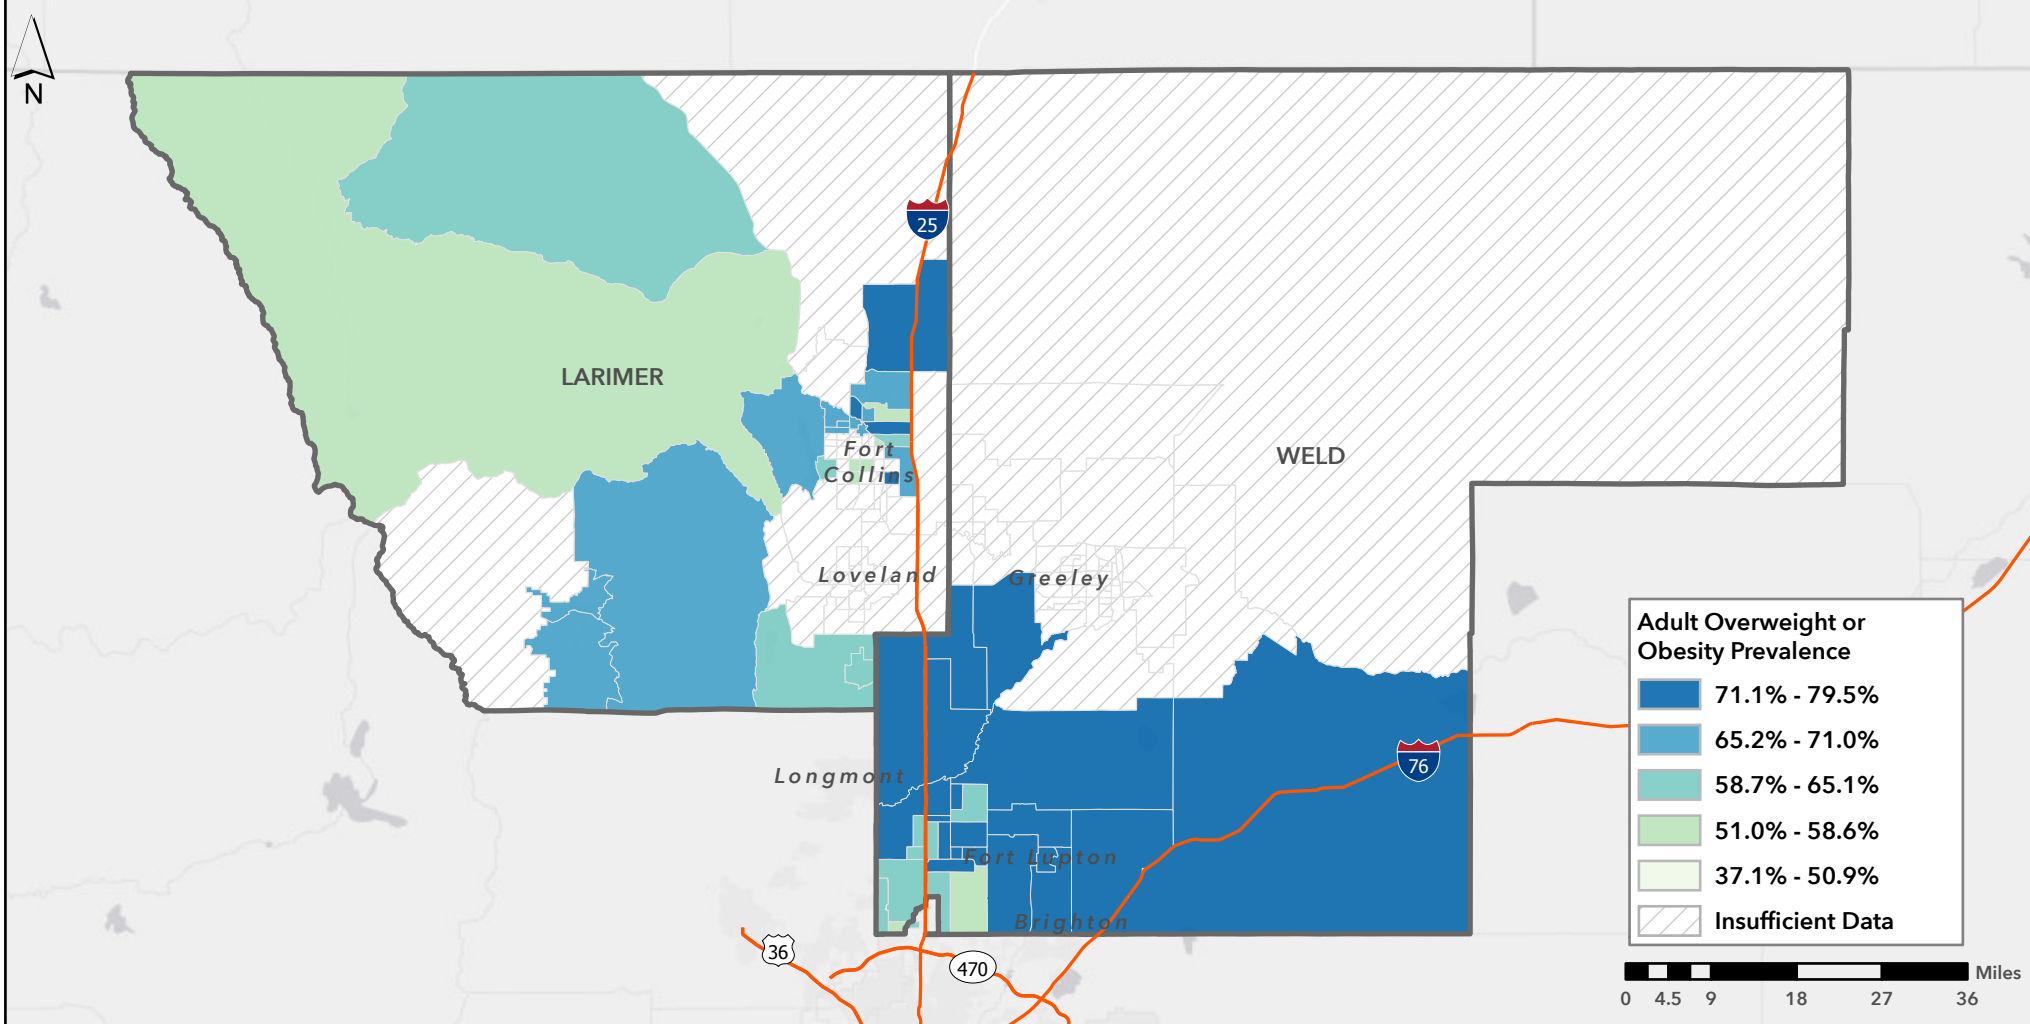

For more information about how BMI is calculated please review the CHORDS BMI Adapter documentation.

Map Created March 2019. To request additional maps and/or aggregated data tables, please contact Greg Budney, CHORDS Project Manager for Public Health, at gregory.budney@dhha.org.
