

Percentage of Care-Seeking Adults with Tobacco Use (18 years and older) By Census Tract, Metropolitan Denver, Colorado, 2016-2017

CHORDS Adult Tobacco Use Prevalence

Seven-County Metro Denver: 16.1%

Adams County: 14.7%

Arapahoe County: 14.5%

Boulder County: 9.4%

Broomfield County: 9.3%

Denver County: 21.6%

Douglas County: 8.6%

Jefferson County: 16.4%

This map displays the percentage of care-seeking adults who have indicated through CHORDS provider screening(s) that they are infrequent or current tobacco users. The percentage of care-seeking adults with tobacco use was calculated by dividing the number of adults residing in a census tract who indicated during screening that they are infrequent or current users of tobacco by the total number of adults who were screened for tobacco use.

These data are comprised of care-seeking adults age 18 and older. The total number of adults represented with at least one screening during the observation time period is 700,595, or 30% of the total adult population of 2,349,509, as reported by the latest 5-year American Community Survey. Census tracts are designated as having insufficient data if: 1) the total population in the census tract has fewer than 50 adults; or 2) fewer than 50 valid screenings for tobacco use in the census tract were collected; or 3) coverage was less than 10% of the adult population.

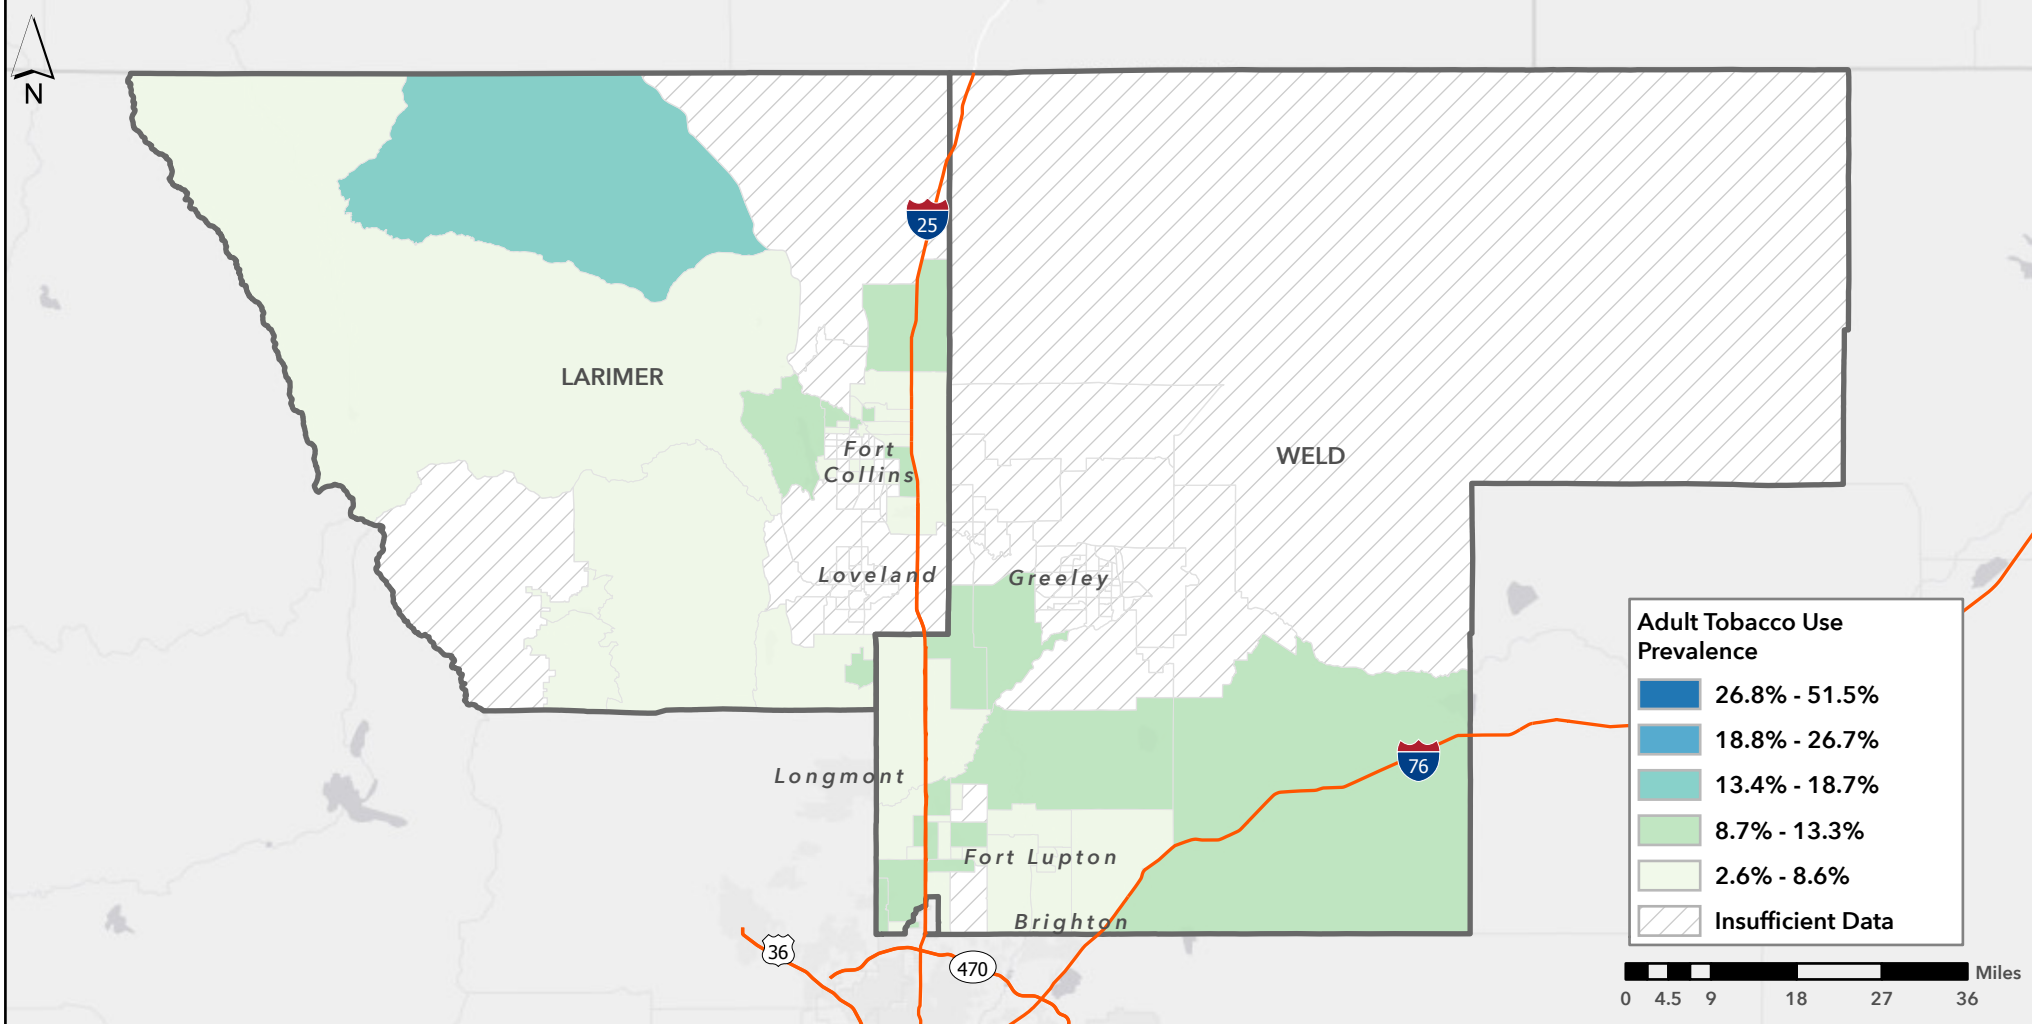

For more information on how tobacco use is defined please review the CHORDS Tobacco Use Adapter documentation.

Map Created March 2019. To request additional maps and/or aggregated data tables, please contact Greg Budney, CHORDS Project Manager for Public Health, at gregory.budney@dhha.org.

A list of participating CHORDS Data Partners can be found at www.chordsnetwork.org.

The Colorado Department of Public Health and Environment provides cartographic and web-based mapping services for CHORDS. This project is funded by The Colorado Health Foundation and the Adults and Child Consortium for Health Outcomes Research and Delivery Science.

Percentage of Care-Seeking Adults with Tobacco Use (18 years and older) By Census Tract, Larimer and Weld Counties, Colorado, 2016-2017

CHORDS Adult Tobacco Use Prevalence: Larimer County: 7.5%, Weld County: 9.5%

This map displays the percentage of care-seeking adults who have indicated through CHORDS provider screening(s) that they are infrequent or current tobacco users. The percentage of care-seeking adults with tobacco use was calculated by dividing the number of adults residing in a census tract who indicated during screening that they are infrequent or current users of tobacco by the total number of adults who were screened for tobacco use.

These data are comprised of care-seeking adults age 18 and older. The total number of adults represented with at least one screening during the observation time period is 58,563, or 12% of the total adult population of 473,009, as reported by the latest 5-year American Community Survey. Census tracts are designated as having insufficient data if: 1) the total population in the census tract has fewer than 50 adults; or 2) fewer than 50 valid screenings for tobacco use in the census tract were collected; or 3) coverage was less than 10% of the adult population.

For more information on how tobacco use is defined please review the CHORDS Tobacco Use Adapter documentation.
